Caption. Permutation importance of the top ten measures in the decision-forest model reported in Table 7 of the main text (“Feature Importance”), under both the debate-held-out and speaker-held-out holdout schemes. The ranking is almost entirely acoustic, led by the two measures shown in the main text to be tied to the speaker’s own voice. This figure presents, in visual form, the same importance values tabulated in Table 7 of the main text.
